USB Type-C Pinout Functions

Enhance ease of use

Receptacle

A1	A2	A3	A4	A5	A6	A7	A8	A9	A10	A11	A12
GND	TX1+	TX1-	V_{BUS}	CC1	D+	D-	SBU1	V_{BUS}	RX2-	RX2+	GND

B12	B11	B10	B9	B8	B7	B6	B5	B4	B3	B2	B1

Two pins on the USB Type-C receptacle, CC1 and CC2, are used in the discovery, configuration and management of connections across the USB Type-C cable

Plug

A12	A11	A10	A9	A8	A7	A6	A5	A4	A3	A2	A1
GND	RX2+	RX2-	V_{BUS}	SBU1	D-	D+	CC	V_{BUS}	TX1-	TX1+	GND

B1	B2	B3	B4	B5	B6	B7	B8	B9	B10	B11	B12

On a standard USB Type-C cable, only a single CC wire within each plug is connected through the cable to establish signal orientation. The other CC pin is repurposed as V_{CONN} for powering electronics
Also, only one set of USB 2.0 D+/D- wires are implemented

High Speed Data Path (RX for USB 3.1, or reconfigured in Alternate Mode)	High Speed Data Path (TX for USB 3.1, or reconfigured in Alternate Mode)	USB 2.0 Interface	Cable Bus Power (from 5V up to 20V)	Sideband use	Cable Ground	Configuration Channel

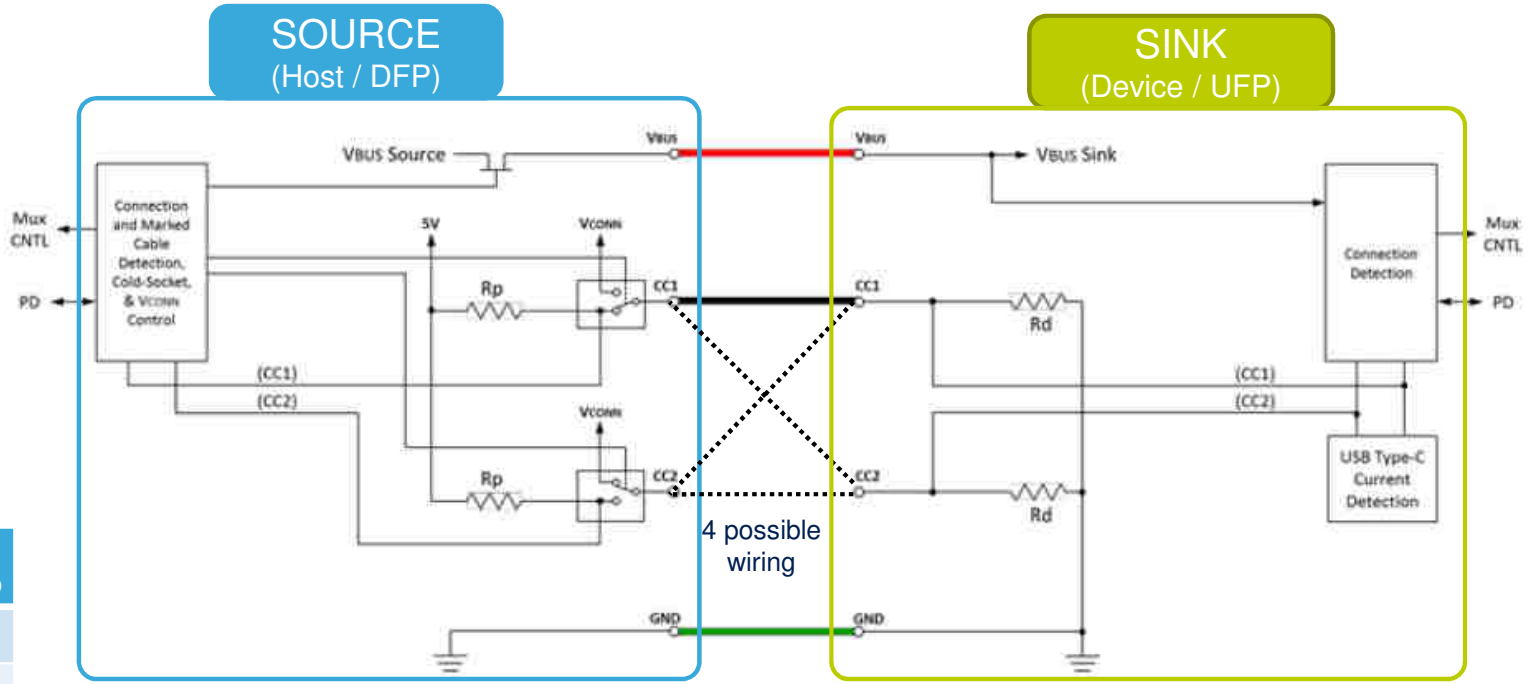
USB-C: Host-to-device Connection



Source Power	Rp pull-up
Legacy current	56 kΩ
1.5A @ 5V	22 kΩ
3A @ 5V	10 kΩ

1. By default: **VBUS is not powered** (cold socket)
2. At insertion detect, the Configuration Channel **(CC pin) is used to solve plug orientation (CC1 or CC2)**
   - HOST identified by Pull-up resistor / current source on its CC pin
   - Device identified by Pull-Down resistor on CC pin
3. After correct Host to Device connection, VBUS is supplied as well as Vconn on the unconnected CC pin
4. Optionally, USB PD, Alternate or Accessory Mode can be supported

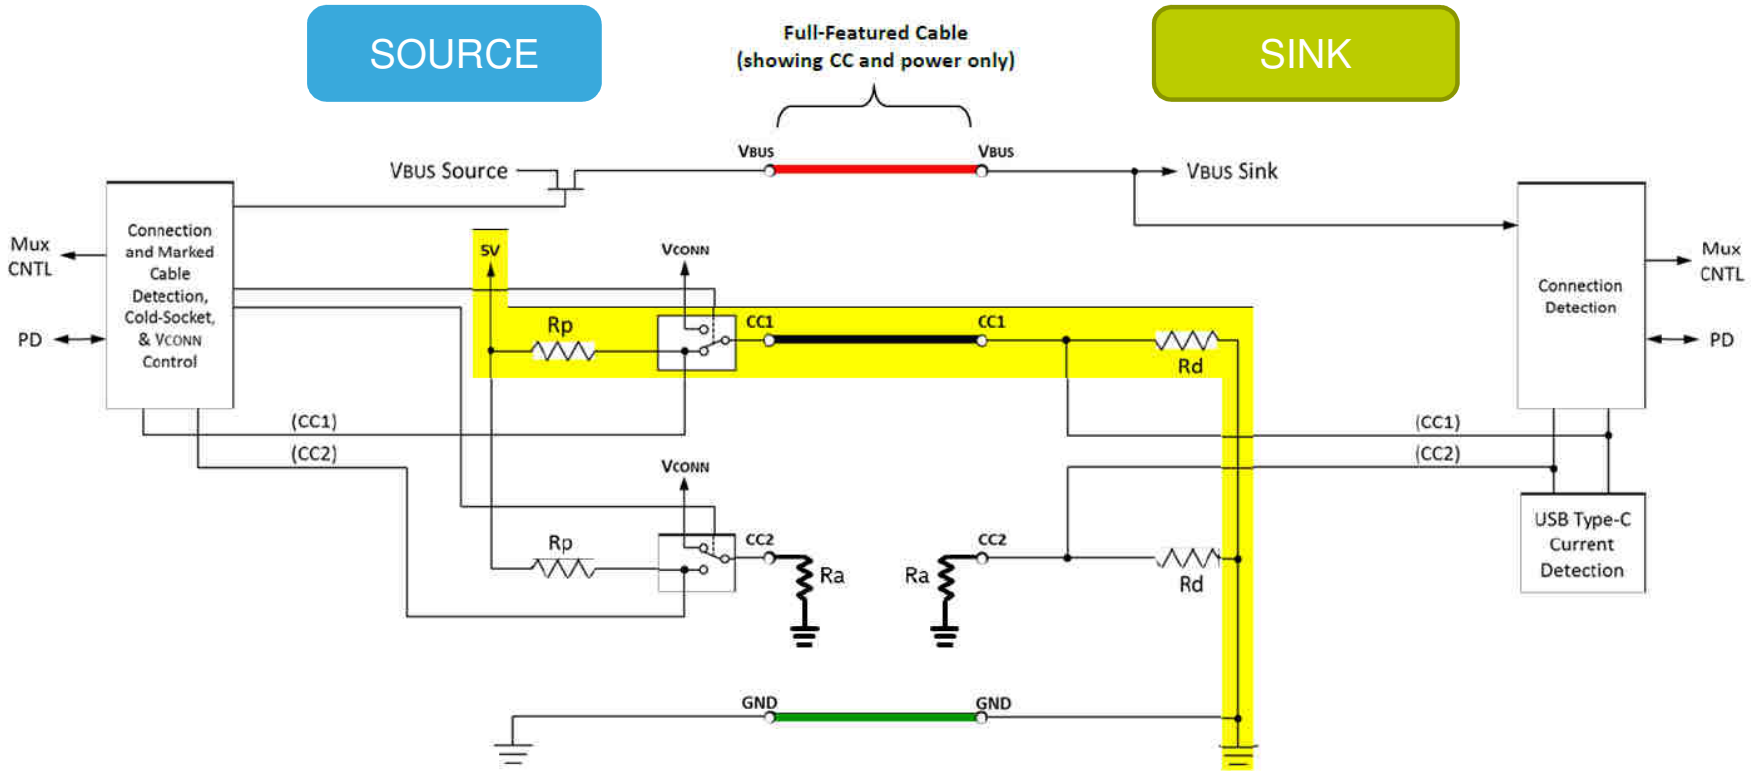
USB-C principle

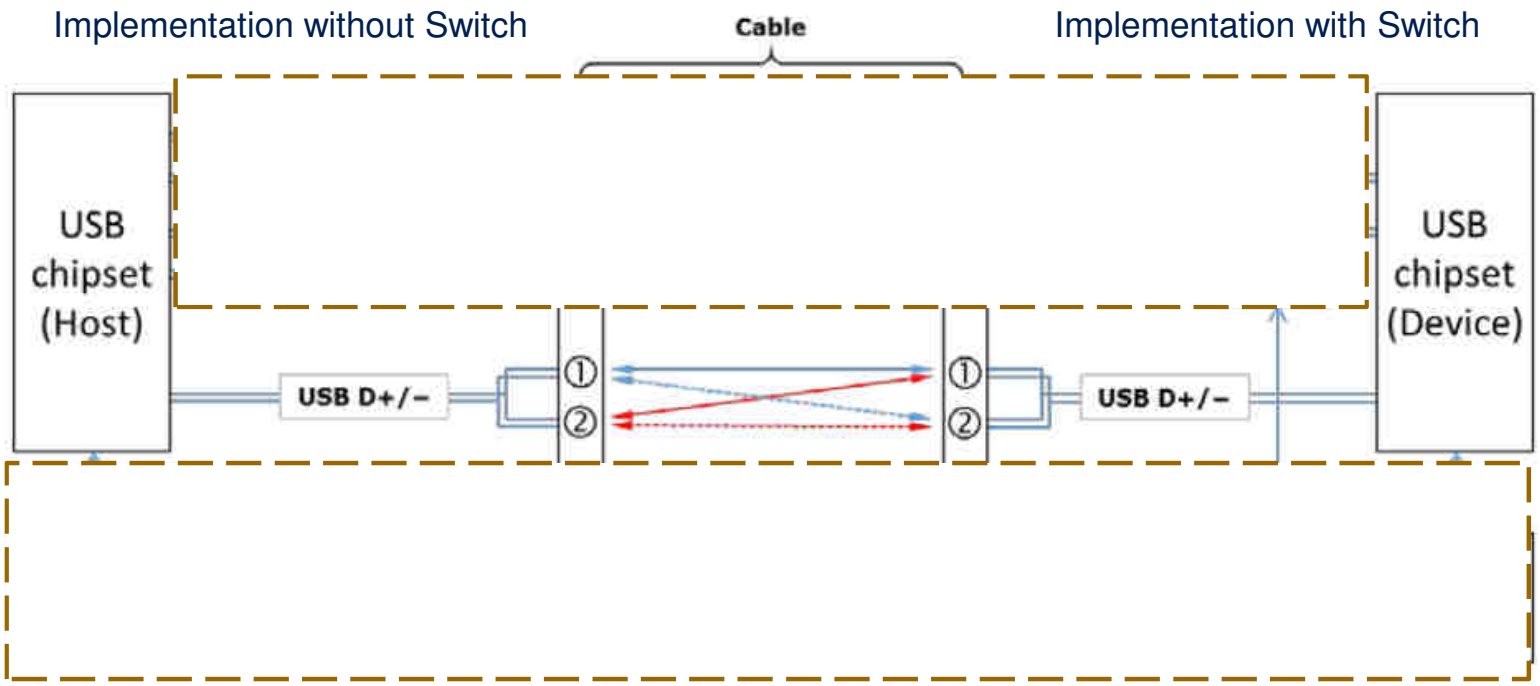
- Source-Only meets Sink-Only



life.augmented

Host-to-device Connection

- Logical Model for Data Bus Routing



USB Power Delivery (USB PD)

Key Characteristics

- Voltage and Current values are **negotiated** (via CC pin)
  - Higher voltage and current: power up to 100W (20V / 5A)
- **Swapping** of power direction, data direction and source of VCONN
- Communication with USB Type-C Electronically Marked Cables (**EMC**)
- Support for **Alternate Modes** of operation (DP, MHL, Thunderbolt)
- Signaling :
  - 1-wire communication, bidirectional
  - Half duplex system
  - Biphase Mark Coding (BMC)
  - Bit rate : 300kbps
  - CRC-32 used to detect data corruption

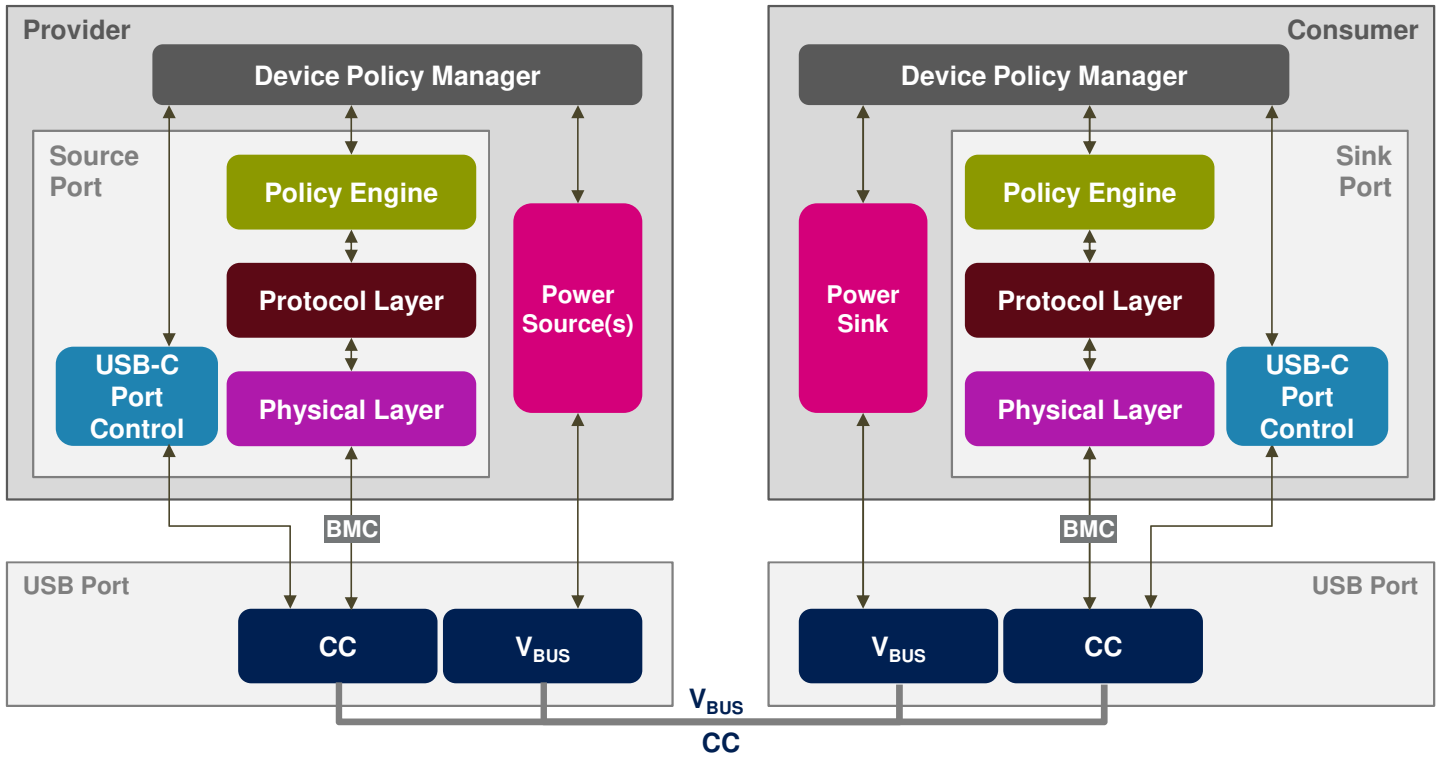
USB Type-C™ and USB Power Delivery

High level architecture

The different layers can be implemented in different topologies HW / SW



Communication across the channel uses Biphase Mark Coding (BMC) over CC in Type C connector
